1. PS-100 POWER SUPPLY

General

PS-100 Power Supply

PS-100 is a regulated power supply unit designed to be a power supply for the BlackBox Series (the rated output current: ± 200 mA).

Although PS-100 is provided only with one output terminal, two input/output terminals on the other units of the BlackBox Series make multiple connection of PS-100 possible.

To prevent noise signal generation on switching ON/OFF the power supply, PS-100 produces a mute signal, muting output terminals of each unit furnished with a muting circuit.

Refer to Table 1 showing how many units of the Black-Box Series can be driven by a single PS-100.

Mute Signal

Mute signal is muted for a certain period of time to prevent transient noise when power is ON or OFF.

Power ON

Transformer output is rectified through diode D403 and smoothed by capacitor C408. Therefore, positive potential appears at C408 (transistor Q411 base). Accordingly, Q411 is in the cutoff state. C409 (22 μ F) is charged with negative potential through R414 (1 M Ω), therefore at the level where the voltage across C409 exceeds V_{be} (base-emitter voltage) of Q412, Q412 turns from OFF to ON.

As a result, Q413 turns on and the mute signal is changed from + V to -10 V, releasing the mute state.

(The mute time depends on C409 and R414 after power is ON.)

Power OFF

Transformer output becomes zero and so C408 is charged with negative potential through R415. At the level where the voltage across C408 exceeds V_{be} of Q411, Q411 turns from OFF to ON and C409 is quickly discharged. Thus, Q412 is cut off and Q413 is also cut off. Therefore the mute signal becomes + V (i.e. mute state). D402 acts to prevent + V from being discharged easily when power is OFF.

Specifications

Maximum Power Consumption . . .	20 VA
Output Voltage	± 10 V
Rated Output Current	± 200 mA
Dimensions	7-1/2(W) x 2-3/8(H) x 3-15/16(D) inches 190(W) x 60(H) x 99(D) mm
Weight	3.5 lb, 1.6 kg

2. 04 (fuse) is not incorporated in the U.S.A. version.

2. SF-100 SUB-SONIC FILTER

General

In disc record reproduction, low-frequency resonance of a tone arm and rumbling of a turn table exist at about 10 Hz and their peak level ranges approximately from 5 to 15 dB.

SF-100 is an active filter to eliminate these noises.

The unit is designed so that no low frequency sound recorded on disc records is sacrificed and no change in tones is effected.

To compensate the personal feeling of insufficiency in low frequency sound caused by the insertion of the Sub-sonic Filter, a Low Boost Switch is provided which can boost signal approximately by 5 dB at 30 Hz.

With both of the Filter Switch and Low Boost Switch turned OFF, the input signal directly appears on the output terminals without passing through the Sub-sonic Filter.

The output of the twin-T filter is amplified by Amplifier 2, while the output of the amplifier is positively fed back through C_2 and R_2 to compensate the level reduction in the range of 20–50 Hz.

Further, to increase the attenuation below 5 Hz, the filter load impedance is lowered with R_4 , and the improvement of characteristics can be realized by changing impedance of every device.

In addition, a high pass filter is incorporated in the input side of Amplifier 1 to ensure an ideal sub-sonic filtering characteristics.

Specifications

Maximum Power Consumption	0.5 VA
Current Consumption	25 mA
Total Harmonic Distortion	less than 0.005% (50 Hz – 20 kHz, 1 V Output)
Frequency Response	40 Hz – 100 kHz \pm 0.5 dB
Sub-sonic Filter	10 Hz: –50 dB, –40 dB (with Low Boost)
Low Boost	30 Hz: + 5 dB
Signal-to-Noise Ratio	better than 110 dB (IHF-A Network)
Mute Function	Furnished
Dimensions	7-1/2(W) x 2-3/8(H) x 4-1/16(D) inches 190(W) x 60(H) x 103(D) mm
Weight	2.7 lb, 1.2 kg

3. LA-100 LINE AMPLIFIER

General

LA-100 is an amplifier with a flat frequency response that may be inserted between amplifiers connected to input or output of a tape deck or the like when the gain of the amplifiers is insufficient.

The gain is selectable at four levels, 0, +6, +12, and +18 dB by combination of IN/OUT of two gain switches of 6 dB and 12 dB.

The voltage amplification of LA-100 at each status of the switches is as follows:

S_1 : open, S_2 : close;

$$A_{V(1)} = \frac{9.1 \text{ k} // 27 \text{ k}}{6.8 \text{ k}} \div 1 \text{ [0 dB]}$$

S_1 : close, S_2 : close;

$$A_{V(2)} = \frac{9.1 \text{ k} // 27 \text{ k}}{6.8 \text{ k} // 6.8 \text{ k}} \div 2 \text{ [6 dB]}$$

S_1 : open, S_2 : open;

$$A_{V(3)} = \frac{(1\text{M} + 9.1 \text{ k}) // 27 \text{ k}}{6.8 \text{ k}} \div 4 \text{ [12 dB]}$$

S_1 : close, S_2 : open;

$$A_{V(4)} = \frac{(1\text{M} + 9.1 \text{ k}) // 27 \text{ k}}{6.8 \text{ k} // 6.8 \text{ k}} \div 8 \text{ [18 dB]}$$

Specifications

Maximum Power Consumption . . .	1 VA
Current Consumption	50 mA
Total Harmonic Distortion	0.005% (20 Hz — 20 kHz, 1 V Output)
Frequency Response	10 Hz — 75 kHz + 0, —0.5 dB

4. BA-150 BRIDGING ADAPTOR

General

Except for the exclusion of power supply from BA-150, BA-150 is identical to the BA-100 presently available. Connection of BA-150 across a preamplifier and stereo power amplifiers allows the usage of stereo power amplifiers in monaural use, and delivers the power amplifier output twice the output in the stereophonic configuration. The use of Nakamichi 420 or 620 power amplifier permits the power output increase to 120W or 350W, respectively, and thus the sound quality is expected to be improved.

Transistors Q101 and Q102 in the first stage constitute an emitter follower and a constant current power supply respectively. Q104 and Q105 constitute a differential amplifier, and Q103 and D101 provide a current mirror circuit. Q106 and Q107 constitute a phase inverter and the output of Q107 is a phase-inverted signal of the input; that is, this unit, receives an input signal and outputs it as a non-inverted output and a phase-inverted output, and permits bridging of the left and right outputs of the power amplifiers to form a monaural power amplifier.

Specifications

Maximum Power Consumption . . .	0.5 VA
Current Consumption	25 mA
Reference Input Voltage	1 V
Input Impedance	10 k Ω
Reference Output Voltage	1 V
Output Impedance	500 Ω
Maximum Input Voltage	4 V
Maximum Output Voltage	4 V
Phase-symmetry Degree	within 1° (5 Hz — 50 kHz)
Dimensions	7-1/2(W) x 2-3/8(H) x 3-13/16(D) inches 190(W) x 60(H) x 97(D) mm
Weight	2.4 lb, 1.1 kg

5. MB-150 MC BOOSTER AMPLIFIER

General

MB-150 is a booster amplifier used to increase gain for an MC type cartridge at low output level.

The gain can be selected at two levels of 38 dB/22 dB by switching the Gain Switch ON/OFF. With the Pass Switch set to ON, the input from the cartridge is directly delivered as the output without passing through the amplifier.

Complementary circuits used in all stages of MB-150 reduce distortion.

The first stage is composed of 10 PNP transistors and 10 NPN transistors, with low noise figures at small signal source impedance, which are connected in parallel respectively to ensure low noise figures.

The second stage adopts the particular triple transistor configuration as used in the first stage of Nakamichi 610, 410, and 630 Equalizing Amplifiers, and its equivalent input noise figure is less than -158 dB (with RIAA IHF-A Network).

The first-stage transistors have the combination of NPN and PNP. Theoretically, if the characteristics of both types are the same, the collector currents of these transistors are equal, and their base currents are the same if the current amplification h_{FE} 's are equal; therefore d.c. voltage across the input terminals vanishes at the identical values of + and - power supply voltage. In actual circuits, However, a + or - voltage slightly remains due to various factors and the voltage should be adjusted to zero by offset voltage adjustment.

Offset Voltage Adjustment

1. Insert shorted pin plugs into input jacks of MB-150.
2. Connect a PS-100 power supply unit to the MB-150 and turn the power switch of the PS-100 ON.
3. Connect an amplifier to the output jacks and listen to sound with headphones or a speaker.
4. Adjust semi-fixed volumes VR101 and VR201 so that switching noises generated at the ON/OFF operation of the pass switch reduce to a inaudible level.

Specifications

Maximum Power Consumption . . .	2 VA
Current Consumption	100 mA
Total Harmonic Distortion	0.005% (20 Hz - 20 kHz, 0.3 V Output)
Frequency Response	20 Hz - 100 kHz + 0, -1 dB (+ 38 dB Gain) 10 Hz - 100 kHz + 0, -0.5 dB (+ 22 dB Gain)
Equivalent Input Noise	-158 dB (RIAA, IHF-A Network)
Ref. Output Level/Output Impedance	5 mV/5.6 Ω
Ref. Input Level/Input Impedance	0.4 mV/56 Ω (+ 22 dB Gain) 63 μ V/56 Ω (+ 38 dB Gain)
Maximum Input Level	200 mV (+ 22 dB Gain) 30 mV (+ 38 dB Gain)
Dimensions	7-1/2(W) x 2-3/8(H) x 3-15/16(D) inches 190(W) x 60(H) x 100(D) mm
Weight	2.9 lb, 1.3 kg

6. EC-100 ELECTRONIC CROSSOVER

General

EC-100, a combination of a high-pass filter, a phase shifter and an adder, separates an input signal into a high-passed output and a low-passed output.

Each of the two output signals is delivered to a respective power amplifier for driving a 2-way speaker system.

A combination of two or more EC-100's makes it possible to drive a 3-way or 4-way speaker system.

The transfer function $G_H(s)$ of a high pass filter is given by the formula:

$$G_H(s) = \frac{S^2}{(S + \omega_0)^2} \dots\dots\dots 1$$

The transfer function $G_P(s)$ of a phase shifter is expressed as:

$$G_P(s) = -\frac{S - \omega_0}{S + \omega_0} \dots\dots\dots 2$$

Further, the added output (Eq. 1 + Eq. 2) of the adder is:

$$G_H(s) + G_P(s) = \frac{\omega_0^2}{(S + \omega_0)^2} \dots\dots\dots 3$$

The transfer function of Eq. 3 accords with that of a low pass filter circuit. Therefore the output of the adder is a signal of lower frequency range.

The crossover frequency setting of EC-100 at 19 steps from 66 Hz to 7.4 kHz is possible by adjusting the Frequency Control VR001.

The Frequency Control is interlocked at 19 frequency positions in total, including 10 positions marked on the Frequency Control and 9 positions at the middle of them. These frequencies are 66, 68, 78, 95, 120, 170, 250, 320, 370, 440, 530, 660, and 880 Hz and 1.4 k, 2.4 k, 3.9 k, 5.4 k, 7 k, and 7.4 kHz. The attenuation characteristic of the filters is 12 dB/oct.

EC-100 has the same characteristics as conventional multi-band filter circuits; however, in the crossover frequency switching system of EC-100 is improved from conventional systems that have to change the resistance and capacitance simultaneously to the system changing only the resistance.

Specifications

Maximum Power Consumption . . .	2 VA
Current Consumption	100 mA
Attenuation	12 dB/oct.
Crossover Frequencies	66, 68, 78, 95, 120, 170, 250, 320, 370, 440, 530, 660, 880 Hz, 1.4 k, 2.4 k, 3.9 k, 5.4 k, 7 k, 7.4 kHz
Distortion	less than 0.005% (20 Hz – 20 kHz)
Signal-to-Noise Ratio	better than 110 dB (IHF-A Network)
Ref. Input Level/Input Impedance .	1 V/50 kΩ
Ref. Output Level/Output Impedance	1 V/560 Ω
Maximum Input Level	4 V
Mute Function	Furnished
Dimensions	7-1/2(W) x 2-3/8(H) x 3-15/16(D) inches 190(W) x 60(H) x 100(D)mm
Weight	2.4 lb, 1.1 kg

System Diagram

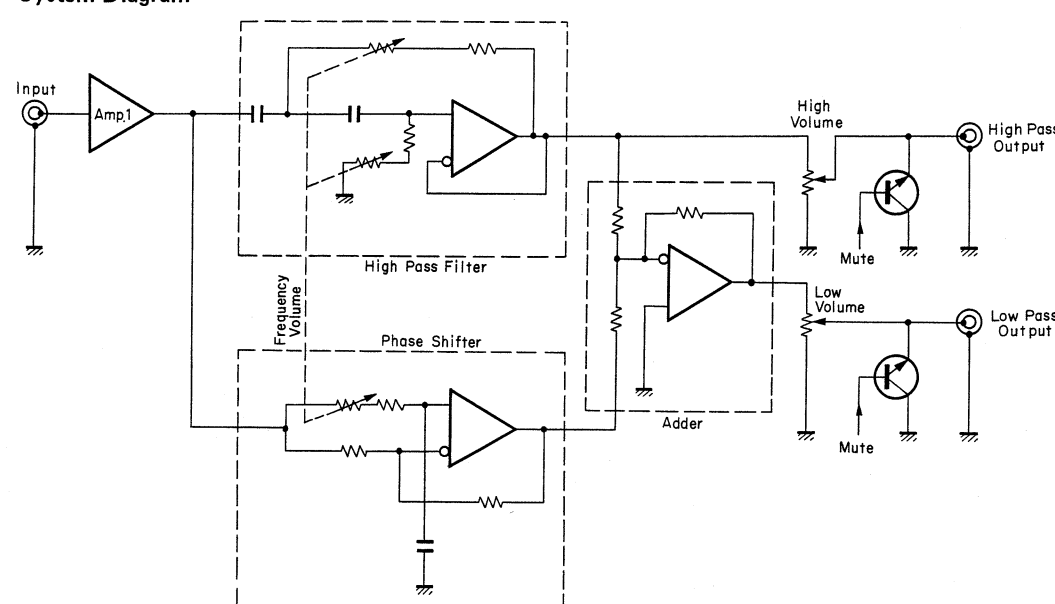

Fig. 6.1

Schematic Diagram

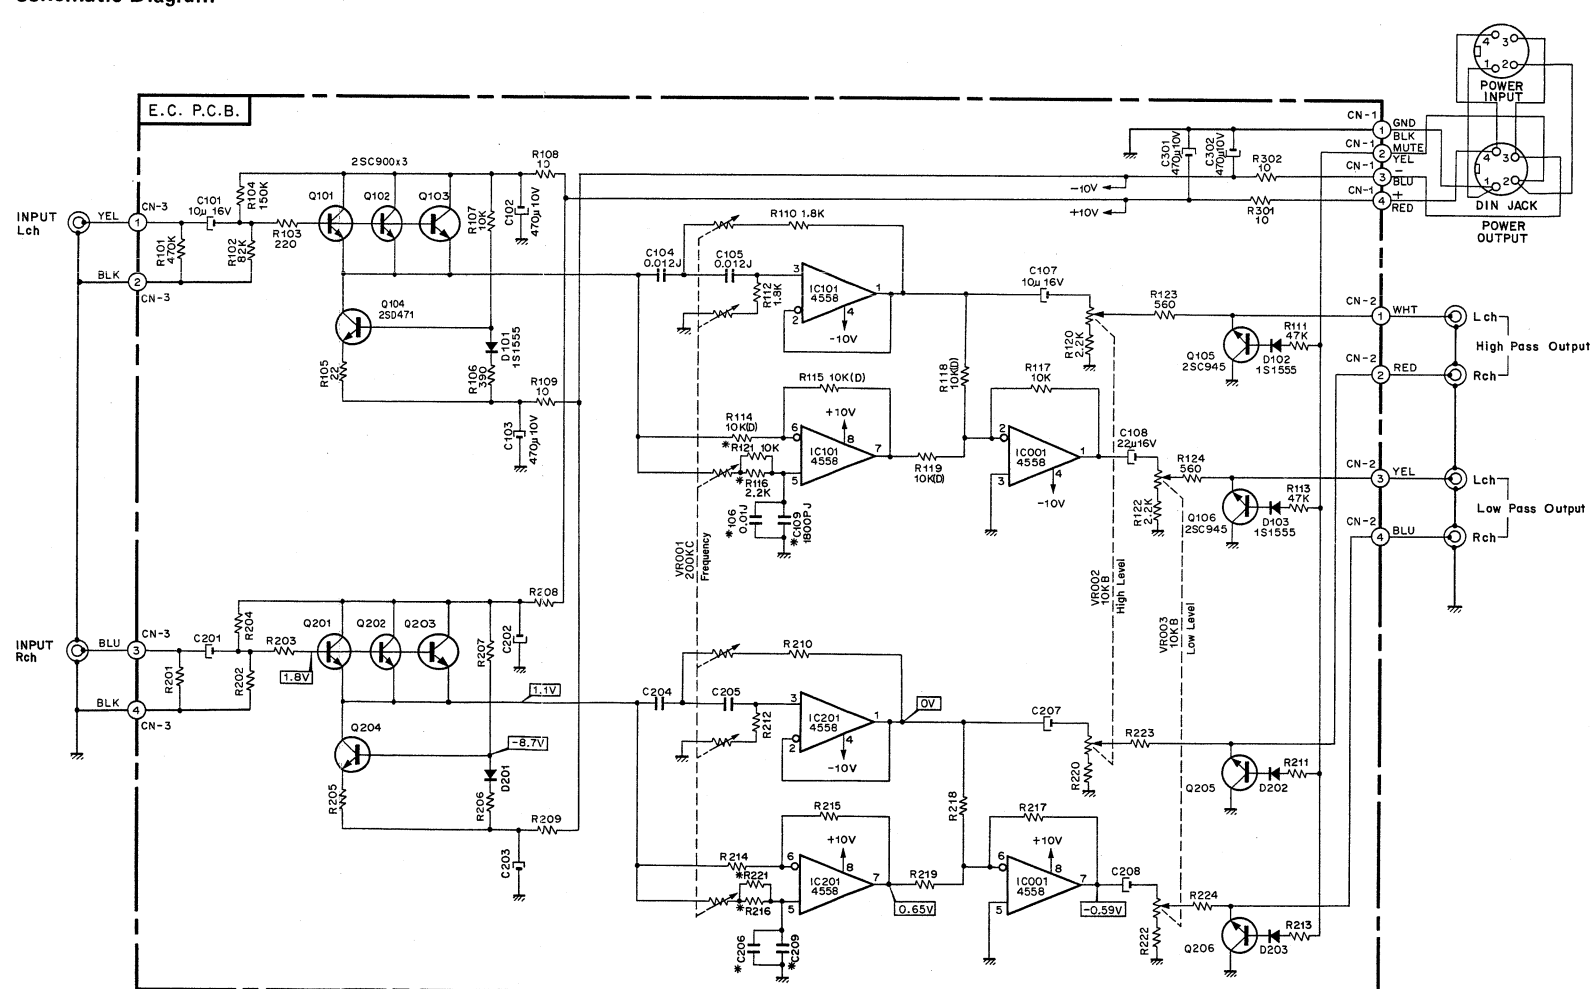

Fig. 6.2

Note:

Resistors and capacitors marked with * will be adjusted in order to achieve accurate crossover frequencies when frequency volume is interlocked at 19 positions.

The standard value of these resistors and capacitors are shown in the figure.

7. MX-100 MICROPHONE MIXER

General

MX-100 is a mixing unit having three microphone inputs for L-channel, R-channel, and Blend. In addition to the use as a simple microphone mixer connected to line input terminals on a tape deck, the unit allows the application to a PA (public address) amplifier directly connected to an Aux. input of a preamplifier, etc.

Further, connection of this unit to Nakamichi 600 (a cassette console) makes microphone recording by Nakamichi 600 possible.

In addition, connection to the line input of a cassette system, such as Nakamichi 700II, 1000II or 500, allows recording using six microphones.

In Fig.7.1, the gain of the L-channel microphone amplifier is given by the formula:

$$Av(L) = \frac{Ry_1}{R_1 + Rx_1 + Ry_1} \dots\dots\dots 1$$

and the gain of blend microphone amplifier:

$$Av(B) = \frac{Ry_2}{R_2 + Rx_2 + Ry_2} \dots\dots\dots 2$$

The gains of the mixing amplifier:

$$Av(ML) = R_5/R_3 \text{ (for L-channel mic. amp. output),}$$

$$Av(MB) = R_5/R_4 \text{ (for Blend mic. amp. output).}$$

Therefore the output of the L-channel is expressed as:

$$Av(LO) = Av(L) \frac{R_5}{R_3} + Av(B) \frac{R_5}{R_4}$$

Similar to the L-channel, the signal of blend microphone is mixed in the R-channel.

Specifications

Maximum Power Consumption . . .	1 VA
Current Consumption	50 mA
Total Harmonic Distortion	0.05% (10 kHz, 1 V Output, 1 V Input)
Input Sensitivity	0.2 mV
Input Impedance	10 k Ω
Output Level/Output Impedance . .	100 mV/560 Ω
Maximum Input Level	1 V (+ 74 dB)
Mute Function	Furnished
Dimensions	7-1/2(W) x 3-3/8(H) x 4-5/16(D) inches
	190(W) x 60(H) x 110(D)mm
Weight	2.7 lb, 1.2 kg

Mechanism Ass'y and Parts List

Fig. 7.4

Schematic Ref. No.	Part No.	Description	Q'ty	Schematic Ref. No.	Part No.	Description	Q'ty
		MX-100 Mechanism		L02	0E00593A	Screw M3x6 Philips Binding Head	2
01	0H03526A	Upper Cover MX	1	L03	0E00157A	Washer 3 mm (plastics)	4
02	HA03714A	VR Knob Ass'y	3	L04	0E00606A	Screw M3x6 Philips Pan Head (3A)	3
03	BA03866A	MX-100 P.C.B. Ass'y	1				
04	0J03689B	VR Holder MX	1	L05	0E00766A	Screw M3x8 Philips Binding Head TP	2
05	0B03882A	Headphone Jack	3				
06	0B08362A	2P Pin Jack	1	L06	0E00714A	Screw M2.6x6 Philips Binding Head	4
07	0B08355A	4P DIN Socket	2				
08	HA03711A	Main Chassis MX Ass'y	1	L07	0E00651A	Washer 2.6 mm (plastics)	4
09	0H03437A	Rubber Foot	4				
L01	0E00713A	Screw M3x6 Philips Truss Head	4
